Bluestar Adisseo Company

Completion of 2nd Phase of Nanjing Liquid Methionine Plant

The Board of Directors and all directors of the Company warrant that this Announcement is free from any false record, misleading representation, or significant omission and will be severally and jointly liable for the authenticity, accuracy, and completeness of the content hereof.

After completion of the second phase of its development late 2015, the Rhodimet unit in Nanjing (China) can produce liquid methionine at full capacity i.e. 140,000 tons p.a. This plant is totally integrated from sulphur and petrochemical raw materials to methionine allowing Adisseo to fully master the complete production process and reach full competitiveness of the site.

This level of production means that the plant, which started production in 2013, has demonstrated that it can run smoothly at full design capacity, matching that of its sister plant in Burgos, Spain. Adisseo can offer uniform provision of liquid methionine from either plant to its customers worldwide. Both production sites are applying the same Health, Safety, Environment & Quality standards, and Nanjing’s performance related to Safety, in particular, is considered to be of the highest standard.

Adisseo wishes to express its gratitude to all its customers worldwide who have selected its Rhodimet AT88 product, allowing significant market growth in recent years and demonstrating its full value to its users.

Adisseo is also actively preparing for future development by combining extensions & debottlenecking of existing production units, and, by also studying new potential sites in order to keep pace with its customers’ development and to meet their request for a high quality, cost efficient source for methionine.

Adisseo is committed to produce at full capacity on all its liquid facilities to pursue the development of the Rhodimet AT88 brand, and is also constantly adjusting its production of powder methionine according to actual customer demand.

Adisseo wishes to draw attention of investors that, as for any industrial project, production capacity is not a systematic guarantee of profit.

Hereby notice.
